## Research interests

I'm a theoretical cosmologist, with a special interest in the phenomenology of beyond- $\Lambda$ CDM models in CMB and LSS observations. During my PhD, I derived state-of-the-art cosmological constraints on a large number of  $\Lambda$ CDM extensions, mostly motivated by the  $H_0/S_8$  tensions, the neutrino mass problem, and inflation. As a postdoc, I focus on developing new deep learning tools in simulation-based inference (SBI) in order to accelerate and refine parameter inference for cosmology.
